

You are here: About Services in MAX > Check-In

Check-In

In MAX there are several ways to [start a service for a customer](#). One way is "Check-In".

When a greeter uses this method to start a service they are adding them to the Business Unit (BU) Queue so a CSR can quickly begin providing the service when the customer arrives at their window.

When a CSR uses this method, the customer is added to the BU Queue and is automatically assigned to the CSR when they *click* **Begin Services**.

Using Check-In provides visibility to the following:

- **Open Services** - These are services that were previously put in Work In Progress .
- **Suggested Services** - These are services that will be due in the coming months that the customer may want to complete during their current visit (such as Registration or Credential Renewals). This section will also include any appointments the customer has made.
- **Queued Services** - These are services that have begun but have not been placed into Work in Progress. This section will also include any services the customer has initiated via AZ MVD Now (such as Credential Applications).
- **Add Service** - Search for the service(s) the customer wants to complete and add them to the list of services to be added to the BU Queue.
