Document Management

Documents in MAX are supplemental files used to satisfy business rules, prove eligibility, and meet requirements for customers to complete MAX services. Documents can also include MAX service artifacts and financial transaction receipts.

All documents that are scanned to the Documents area of the Customer Record are viewable by the Customer in AZ MVD Now.

Based on configured business rules or privacy levels of the documents, some documents scanned to a service (view [Scanning in MAX](#)) may not be visible in AZ MVD Now.

For a helpful reference on what Document Types can be found under each Document Category, view the [Document Scanning Charts](#) section for more information.

Documents used to satisfy business rules, prove eligibility, and meet service requirements are loaded into MAX in different ways.

- They can be uploaded by the customer through AZ MVD Now.
- They may be scanned into MAX by a CSR in the MVD office (generally after a paper version is supplied by the customer to meet the requirements for the Service they are requesting) . View [Scanning In MAX](#) for more information. Based on configured business rules or privacy levels of the documents, some documents scanned to a service (view [Scanning in MAX](#)) may not be visible in AZ MVD Now
- They can be generated by MAX, such as service artifacts or financial transaction receipts. MAX-generated documents will also display in the Customer's Documents and cannot be deleted.

Documents that are viewed in OnBase do not necessarily need to be uploaded into MAX. For Credential Issuance services, do pull the document from OnBase and upload into the service in MAX to ensure the requirements are satisfied.

Original Credentials, including CDLs, have a 10-year retention period (from date of issuance) for all source documents provided to establish a name and date of birth, including the Credential Application. All source documents must be scanned/uploaded within the service when issuing an original or renewal.
