Scanning In MAX

There are multiple ways to scan / upload documents during a service, and how you scan impacts:

- Where the documents are saved
- If a customer can see the documents in AZ MVD Now
- If MAX will automatically use the documents to satisfy future requirements

There are several different options for scanning service-related documents into MAX:

- Scan During a Service (for credentials)
 - Done during the service on the Requirements tab and all scanned documents are saved as part of the Service Artifacts
- Service Finalized (for title and registration)
 - Done in the Service Finalized screen to scan Title Summary and supporting documentation
- Scan to Completed Service
 - Done when the service has been completed and documents were not 'Scan During a Service'
- Scan Later
 - Rarely used; Done when scanners are not functionally properly while service customers

Documents scanned to a **T & R Service** (viewable in Service History) **will NOT display** in the Documents area of the Customer Record for security and privacy purposes, because all Customer Documents are viewable to the Customer in AZ MVD Now.

Documents scanned to a **Credential Service** (viewable in Service History) **will display** in the Documents area of the Customer Record for security and privacy purposes, because all Customer Documents are viewable to the Customer in AZ MVD Now.

View the [Document Management](#) topic for more information about Document Requirements and locating or viewing documents in MAX.
