

You are here: Documents and Scanning > eSignature

eSignature

eSignature allows you to obtain a customer's signature electronically for MVD documents requiring a signature. For example, if a customer forgets to sign a submitted Title and Registration Application, or the Title Summary page, instead of mailing the customer the document to sign and return to MVD, use eSignature to request their signature electronically.

eSignature can be used only on MVD documents that have the 'MVD Agent or Notary' section. If it is a document that only has a notary option, then a physical signature will be required.

If the customer has already activated their Customer Account they can eSign the document in AZ MVD Now. Or,

The customer must have an email address in their Customer Record. See [Adding an Email Address to a Customer Account](#) for more information.

AND

The customer must have a Social Security Number (SSN) on the Customer Record in order to eSign a document. See [Adding or Editing a Social Security Number \(SSN\)](#) for more information.

eSignature Process Overview

The eSignature process consists of three main steps:

1. **MVD:** The document requiring a signature is scanned or uploaded into the Customer Record in MAX and sent to the customer in AZ MVD Now.
2. **Customer:** The customer signs in to AZ MVD Now, locates the notification, and electronically signs the document via DocuSign, submitting it back to MVD.
3. **MVD:** A notification is sent in MAX indicating the document has been signed. The signed document can now be viewed in MAX.
