Finding a Customer

There are multiple ways to search for a customer in MAX. The most common method of finding a Customer Record is by their Arizona Credential Number (DL or ID) or Social Security Number (SSN). MAX has a **Quick Search** field in the navigation bar where you can type the customer's Unique Identifier (DL, ID, or SSN).

When a unique identifier is not known, you can use various search criteria in **Quick Search** field or *click Advanced Search* to enter additional search criteria.

- ▶ **Quick Search**
- ▶ **Narrowing Your Search Results**
- ▶ **Advanced Search by Customer**

Search Results

Depending on how broad your search criteria are, your search results may have several pages of customers that meet your criteria. Fortunately, the **Search Results** page has several options that allow you to view, sort, and filter the results to find the desired Customer Record faster.

If multiple records for your customer have been found, view the [Combine Records Requests](#) section below.

- ▶ **Reviewing Your Search Results**
- ▶ **Filter Results**
- ▶ **Sort Results**
- ▶ **Combine Records Requests**
- ▶ **"Go To Customer" Icon**
