Commercial Driver License Vision Standards

CDL applicants must have binocular vision and meet the following CDL vision standards: using each eye independently:

- Visual acuity (clarity of vision) must be 20/40
- Visual field (temporal and nasal peripheral vision) must be 70° or greater temporal and 35° or great nasal
- Recognition, must be able to distinguish the colors of a traffic signal (or device) showing standard red, green and amber

View the [Vision Screening](#) topic > [Binocular and Monocular Vision](#) section for more information on what binocular vision is.

Identifying Corrective Lens or Hearing Aid Restrictions

In order to determine if a CDL driver is required to have a corrective lens or hearing aid restriction, the INTERstate or INTRAstate CLP or CDL applicant/holder must have a FMCSA-qualified medical professional **electronically** submit current medical examination documentation.

For an INTRAstate CDL applicant/holder with a medical variance (waiver or exemption), they must submit the **paper** medical examination documentation to a MVD field or ATP office, through mail, or email. See the [Submitting Medical Examination Documentation](#) section for mailing and email details.

An over-the-counter MVD office vision test is not acceptable.

If a driver is stating they don't require a B restriction, the Division will require current medical examination documentation.

► Example of MEC & MER

"B" Corrective Lens

If the driver needs corrective lenses to meet this requirement, a "B" restriction will be placed on the CDL.

When adding a 'B' Restriction, ensure all endorsements and restrictions are being re-added, as applicable.

A customer uses a Bioptic Telescopic Lens System (BLS) is not eligible for a CDL, therefore, an Arizona Intrastate Medical Waiver, form #70-0106 will not be issued.
