Compliance Within a Service

The MAX Withdrawal and Compliance engine automatically applies stops, cancellations, suspensions and revocations whenever incidents are recorded. MAX also automatically adds all compliance requirements the customer must satisfy in order to clear their path to completing services at the MVD. In many cases, the compliance the customer must accomplish is out of your control. For example, the customer must contact the court, or, the customer must wait a certain amount of time, etc. In these cases MAX will automatically remove the withdrawals once the court transmits the compliance data, or once the waiting period expires. View the [Event Management](#) topic for more information.

However, there will be times when you will be able to work with the customer to satisfy their compliance requirements immediately. If the customer is required to pay a fee, for example, MAX will prompt you with the option to collect the fee(s) before allowing you to proceed with the service. Similarly, if the customer must provide documentation, you may be able to receive those documents, and satisfy the compliance requirement.

This tutorial assumes you have a working knowledge of how to start a service in MAX. If you need clarification, view the [Starting a Service](#) topic.
