Incident Management

Incident management is part of the larger topic of [Event Management](#). An incident is anything that can impact a driver's privileges or a vehicle's status, such as traffic citations, DUIs, failure to comply with insurance requirements. There are 1000s of potentially impactful incidents ranging from bouncing a check to abandoning a vehicle to receiving a legal judgment or conviction, and many more. Incidents get added to MAX in a few key ways:

- Transmitted into MAX electronically (by courts, law enforcement, towing companies, etc.).
- MVD Central Services enter incidents manually (primarily from court abstracts).

No matter how incidents get entered into the system, MAX automatically applies associated business rules and, then, when appropriate, automatically triggers any applicable withdrawals (stops, cancellations, suspensions, revocations, or disqualifications) and compliance requirements the customer must meet before they can get their driving privileges and or vehicle T&R services restored.

When an unlicensed driver commits an offense for which a person's driving privilege could be suspended, the Division shall not accept the unlicensed driver's application for an instruction permit (IP) or driver license (DL) until the suspension period has ended.
