Manage Electronic DUI Rejections and Convictions

There are two functions used in MAX to help manage electronic convictions and rejections from the various batch jobs:

- Manage eDUI Rejections
- Manage Electronic Conviction

These functions are primarily used by the **Records** team (non-commercial convictions) and **MVD Support Services** (commercial convictions).

Convictions are transmitted electronically into MAX and when possible, are automatically placed on the appropriate Driver Record, with the corresponding Withdrawals and Compliance.

However, not all Convictions transmitted electronically can be matched to a single customer for a number of reasons, including but not limited to:

- Multiple records from a common name
- Missing or incorrect identifying data such as DOB, DLN, etc.
- Receiving multiple or duplicate court actions for the same Incident (e.g. a satisfied Failure to Appear, when no Failure to Appear yet exists on the record)
- Receiving convictions that occurred in Arizona but for customers credentialed in another state (no Customer Record exists in MAX).

Both the **Records** team and **MVD Support Services** work these items in MAX to research the correct customer and apply the correct conviction data to the Driver Record.

The steps below reflect how to navigate the functions in MAX. Follow your department's defined procedures for researching and remedying each conviction.

- ▶ **Manage Electronic Conviction**
- ▶ **Manage eDUI Rejections**
