

You are here: Title & Registration Services > Suspend Registration

Suspend Registration

This function allows an authorized user to suspend a vehicle registration when there is no incident or withdrawal associated to the situation warranting the suspension (e.g., as a part of an ongoing investigation or at the request of OIG).

For most registration suspensions, an incident would trigger a [Withdrawal](#) action. Notification would be made to the customer to let them know their vehicle registration will be suspended if the customer doesn't meet specified criteria within the defined period of time.

Manual registration suspensions also trigger a notification to the customer. However, they will not necessarily include [Compliance Requirements](#) because the suspension was not triggered as part of an [Incident Management](#) process. The Suspend Registration service in MAX can be applied to vehicles with an Active, Permanent, or Expired registration status.
