

You are here: Title & Registration Services > T and R Corrections

T and R Corrections

The T&R Corrections service allows a CSR to correct an error on a title and/or registration due to data that did not convert properly or other CSR errors that require supervisor approval, such as:

- Odometer corrections
- Ownership corrections
- Make / Model / Body Style corrections (including length and width for travel trailers)
- VIN - Only when there is an Arizona title on record
 - When a VIN needs to be corrected on an ARO or SPI, you cannot use T&R Corrections, because the Title tab does not display any information (including the VIN). Have an upline approver submit a [Service Portal](#) ticket in order for the VIN to be corrected.

It is important that all supporting documents must be scanned as a 'T and R Correction Service'. Some of these documents include but not limited to: out-of-state title, level 1 inspection form, service history documents (ownership documents), etc.

This service is designed to make corrections related to data that didn't convert properly from TPX. There may be scenarios where using T & R Corrections to fix a CSR error is permitted, but you will be required to get a supervisor override to do so. An example would be to fix a T & R service for a vehicle that is new in the state, where you forgot to add the second owner. There would be no previous title and/or registration to "re-establish" so you would need to use this service. See [Cancel Re-Establish Title](#) and [Cancel Re-Establish Registration](#) for more details about "resetting" a prior Title or Registration to correct an error made by a CSR.

Any changes made on the Title tab of the service will result in a new title being sent to AAMVA.

- This services does NOT charge or credit any fees.
- Depending on changes made, an override may be requested.
- All changes made in this service will be audited.
- When correcting a Title or Registration record, the Customer selected to begin the service must be listed on the ownership of the vehicle.

When to Correct a Title Record

A corrected title record is required when any of the following types of errors are discovered:

- Vehicle description errors that change the original vehicle description, such as the vehicle make, VIN, year, or body style
 - Verification of the correct information by archived documents (OnBase or MAX)
- Ownership errors that change the name of the owner or lienholder
- Registration (plate, insurance, emissions, exemptions)

There are very few restrictions on what can be changed, but it is important to remember to use the service **only to fix data errors**.

Other T & R adjustments should be made using the applicable service in MAX (e.g. use the **Update Registration** service to change a license plate or the declared gross weight**).

**Screens in MAX will read as Declared GVW, which is considered the declared gross weight of the vehicle.

The declared gross weight will be displayed in the Declared Weight field under the Registration section on the Vehicle Information Page.

Policy will use the term declared gross weight.

Titles & Corrections

With MAX, titles are electronic title records held within MAX. When corrections are required, proceed with making any required changes to the title record, with or without the current Arizona title (if applicable), as long as supporting documentation is available and scanned and uploaded into MAX.

A paper title exists, a T & R Correction needs to be done, technically certain scenarios **used** to require the paper title to be submitted (say the VIN needs to be corrected), but the customer lost the title, or they simply didn't bring the title with them. Just make the corrections in MAX and scan and upload any supporting documentation in to the service to note the correction.

A paper title exists, customer needs a service done that requires a CSR to use T&R Corrections or Title & Reg service, and a new title number now exists and it's electronic. When the customer goes to sell the vehicle the Title Transfer (Bill of Sale) form will be used to transfer ownership.

If the customer does have the paper Arizona title with them at time of correction and corrections were made, inform your customer the title is no longer valid and needs to be destroyed.

It is no longer valid because a new title number was created.

Required Forms for Corrections

When the Division initiates the correction, a designated CSR will need to prepare and mail a letter to the owner and send a [T&R Application \(Single\), form #96-0236](#) along with the letter requesting a signature and any other required documentation, if applicable.

If the correction involves a record with an ELT, the CSR's upline approver must contact the MVD ELT Help Desk by phone. View the [Electronic Lien and Title \(ELT\)](#) topic for MVD ELT Help Desk contact information.

If the lienholder initiates the correction, the lienholder will write 'on file' in the 'All Owners Sign Here' box on the [T&R Application \(Single\), form #96-0236](#) or Arizona Title Summary. If it is a ELT title, the lienholder must contact their ELT Service Provider.
